A: You should select to run a local restore instead of downloading from the internet. Select your recently installed location and click next Click on "Restore" and go through the wizard You may need to accept the license for the application for this to work though. Autonomous car maker Ford has released a series of videos of its self-driving vehicle navigating busy city streets. It's a long-awaited step towards the company's goal of having autonomous cars on the road within five years. The company's self-driving car has a long, white canopy, similar to the shipping containers it uses to build cars. Four cameras and two radar sensors record what the car sees, according to a release. The system can detect stopped, red, speeding, and following traffic. Ford has said that it is not testing self-driving cars on public roads. But in a simulator it has demonstrated the ability to travel up to 50 miles per hour. The company says that human safety drivers will always be in the driver's seat. The cars run at a top speed of 25 miles per hour. They will be limited to the company's facilities in Michigan and California. "The average autonomous vehicle will be able to travel up to 100 miles a day on city streets, with fewer stops than a manually driven car," said Raj Nair, the company's executive vice president of product development. The fleet of cars was designed for the company's campus in Dearborn. Ford says it will test its autonomous cars in other locations in the next year. The United States has been criticized for its slow progress on autonomous cars. The Obama administration created a task force to study the possibilities of self-driving cars, but it has not taken any actions. Some say the U.S. lacks the expertise to develop a safe self-driving car. Ford is the first major automaker to release an all-electric vehicle. It has not released pricing information. But company officials have said it is not affordable for the average consumer.NYU.edu requires JavaScript be enabled in your browser in order to use important features of the site.
